Amendments to the Claims:

Please amend claims 1, 20, 27, 29, and 50 as shown below. Please cancel claims 9, 23,

35, 45-46, 48, and 53-55 without prejudice or disclaimer of the subject matter recited therein.

This listing of claims will replace all prior versions, and listings of claims in the application:

1. (Currently Amended) A panel assembly mountable along an opening in a dock wall for

providing a dock shelter or seal, the dock wall having a front face around the sides of the

opening and an inside face facing into the opening, with the front face and the inside face

meeting at a corner, comprising:

a first panel and a second panel, wherein said second panel is adapted for essentially

pivotal movement relative to said first panel about a first axis, and said first panel is adapted for

essentially pivotal movement relative to the front face of the dock wall about a second axis and

said first panel is mountable to the front face of the dock wall so that the second axis is adjacent

the front face and spaced laterally outside of the corner.

2. (Original) A panel assembly according to claim 1, wherein said first panel has a front

edge and a rear edge and the second panel has a front edge and a rear edge, and the rear edge of

said second panel is pivotally connected to the front edge of said first panel.

(Original) A panel assembly according to claim 2, wherein the rear edge of said second 3.

panel is hingedly connected to the front edge of said first panel.

4. (Original) A panel assembly according to claim 3, wherein the rear edge of said second

panel is castellated and the front edge of said first panel is also castellated such that the rear edge

of said second panel and the front edge of said first panel interlock to form a hinge joint.

Page 2 of 17

Serial No.: 10/615,296

Customer No. 30734

5. (Original) A panel assembly according to claim 4, further comprising a stay, wherein said

panel assembly has a length and said stay is positioned in an opening extending the length of said

panel assembly through the castellated front edge of said first panel and the castellated rear edge

of said second panel.

6. (Original) A panel assembly according to claim 5, wherein said stay biases said panel

assembly to an open position.

7. (Original) A panel assembly according to claim 2, wherein:

said panel assembly has an interior face on the side of the dock opening and an opposing

exterior face;

said panel assembly further comprises at least one backing member positioned at the first

axis on the interior face of the said panel assembly.

8. (Original) A panel assembly according to claim 7, wherein the backing member biases

the panel to an open position where the second panel is held away from the first panel.

9. (Cancelled)

10. (Original) A panel assembly according to claim 7, wherein said first panel has recessed

portion at or near the front edge of the first panel, and said second panel has a recessed portion at

or near the rear edge of the second panel, and the backing member is adapted to fit between the

recessed portions.

11. (Original) A panel assembly according to claim 1, wherein the first panel and the second

panel comprise a rigid but flexible material.

12. (Original) A panel assembly according to claim 11, wherein the material is blow molded.

Serial No.: 10/615,296

Customer No. 30734

13. (Original) A panel assembly according to claim 1, wherein at least one of said first or

second panels comprise a plurality of panel portions which are assembled to form said first or

second panels.

14. (Previously Presented) A panel assembly according to claim 2, wherein the rear edge of

said first panel is directly mountable to the dock wall.

15. (Original) A panel assembly according to claim 14, wherein said panel assembly further

comprises at least one L-shaped bracket for flexibly mounting the rear edge of said first panel to

the dock wall.

16. (Previously Presented) A panel assembly according to claim 1, further comprising a seal

member located at the front edge of said second panel, the seal is integral with said second panel,

or can be both integral and a separate component.

17. (Original) A panel assembly according to claim 15, wherein the seal member comprises a

hook portion located at the front edge of said second panel, the hook portion comprises a seal

strip.

18. (Original) A panel assembly according to claim 1, wherein said first panel has a length

and said second panel has a length and the length of said first panel and the length of said second

panel are sized for vertical mounting along the opening in the dock wall.

19. (Original) A panel assembly according to claim 1, wherein said first panel has a length

and said second panel has a length and the length of said first panel and the length of said second

panel are sized for horizontal mounting along the width of the opening in the dock wall.

Page 4 of 17

Serial No.: 10/615,296

Customer No. 30734

20. (Currently Amended) A dock shelter or seal for mounting along an opening in a wall of a

dock, the dock having a dock floor, the dock wall having a front face around the sides of the

opening and an inside face facing into the opening, with the front face and the inside face

meeting at a corner, comprising:

at least a panel assembly comprising a first and second panel, wherein said second panel

is adapted for essentially pivotal movement relative to said first panel about a first axis, and said

first panel is adapted to be mountable to and pivotally moveable relative to the front face of the

dock wall so that the second axis is adjacent the front face and spaced laterally outside of the

corner.

21. (Previously Presented) A dock shelter or seal according to claim 20, wherein the dock

shelter further comprises at least a second panel assembly, wherein the first panel assembly is

directly mountable along a side of the opening in the dock wall which is approximately

perpendicular to the dock floor, and the second panel assembly is directly or indirectly

mountable along a second side of the opening in the dock wall which is also approximately

perpendicular to the dock floor.

22. (Previously Presented) A dock shelter or seal according to claim 21, wherein the dock

shelter further comprises a top portion panel assembly, wherein the top portion panel assembly is

directly mountable to a side of the opening in the dock wall which is parallel to the dock floor

and the top portion panel assembly is positioned along the dock wall above and substantially

perpendicularly to the first and second panel assemblies.

23. (Cancelled)

Page 5 of 17

Serial No.: 10/615,296

Customer No. 30734

24. (Original) A dock shelter or seal according to claim 23, wherein at least one of the first,

second, or top panel assemblies each further comprise a sealing member.

25. (Original) A dock shelter or seal according to claim 20, wherein said first panel is

adapted for essentially pivotal movement relative to the dock wall about a second axis.

26. (Original) A dock shelter or seal according to claim 25, wherein said first panel is directly

or indirectly mountable to the dock wall for flexible movement.

27. (Currently Amended) A dock seal assembly mountable along an opening in a dock wall

having a front face around the sides of the opening and an inside face facing into the opening,

with the front face and the inside face meeting at a corner, comprising:

an expandable panel assembly configured to accommodate trucks of varying widths,

comprising a first and a second panel assembly, the first panel assembly including:

a rear first panel having a front edge and a rear edge;

a front first panel having a front edge and a rear edge;

a first seal portion;

wherein the rear edge of said front first panel is pivotally connected to the front edge of

said rear first panel defining a first axis of rotation, the rear edge of said rear first panel is

adapted for essentially pivotal movement relative to the front face of the dock wall about a

second axis of rotation and is directly or indirectly mountable to a first vertical side of the dock

wall opening, and the first seal portion is located at the front edge of said front first panel;

the second panel assembly comprising:

a rear second panel having a front edge and a rear edge;

Serial No.: 10/615,296

Customer No. 30734

a front second panel having a front edge and a rear edge;

a second seal portion;

wherein the rear edge of said front second panel is pivotally connected to the front edge

of said rear second panel defining a third axis of rotation, the rear edge of said rear second panel

is adapted for essentially pivotal movement relative to the dock wall about a fourth axis of

rotation and is mountable to a second, opposing vertical side of the dock wall opening, and the

second seal portion is located at the front edge of said front second panel; and,

wherein the first, second, third, and fourth axes of rotation are substantially parallel to

one another, and wherein the first panel assembly is mountable to the front face of the dock wall

so that the second axis is adjacent the front face and spaced laterally outside of the corner.

28. (Original) A dock seal or shelter according to claim 27, wherein the expandable panel

assembly is configured to accommodate truck widths ranging from about 8' to about 8' 6" and

wherein the trucks may be parked up to 6" off-center.

29. (Currently Amended) A dock seal apparatus for mounting on a dock wall and for

sealingly engaging a truck parked at a loading dock wall having a front face around the sides of

the opening and an inside face facing into the opening, with the front face and the inside face

meeting at a corner, comprising:

a first expandable panel assembly directly mountable to the dock wall and configured to

sealingly engage trucks of varying widths, comprising:

a rear panel means;

a front panel means; and,

Page 7 of 17

Serial No.: 10/615,296

Customer No. 30734

a sealing member means located at an edge of said front panel means, wherein

said front panel means is operably coupled to said rear panel means such that said front panel

means deflects toward the dock wall opening when said expandable panel assembly is engaged

by the vehicle, and said rear panel means is adapted to be operably coupled to the dock wall such

that said rear panel means moves toward the dock wall opening when said expandable panel

assembly is engaged by a sufficiently narrow vehicle and remains substantially unmoved or

moves away from the dock wall when said expandable panel assembly is engaged by a

sufficiently wide vehicle, and wherein the first panel means is pivotably mountable to the front

face of the dock wall so that the second axis is adjacent the front face and spaced laterally

outside of the corner.

30. (Original) A dock seal apparatus according to claim 29, wherein said front panel means is

operably coupled to said rear panel means by a hinge means.

31. (Original) A dock seal apparatus according to claim 30, wherein said hinge means biases

said front panel away from the dock wall opening.

32. (Original) A dock seal apparatus according to claim 29, wherein said first expandable

panel assembly is sized to mount along a first vertical side of the dock wall opening.

33. (Original) A dock seal according to claim 32, further comprising a second expandable

panel assembly sized to mount along a second vertical side of the dock wall.

34. (Original) A dock seal according to claim 33, further comprising a top portion panel

assembly sized to mount along a horizontal side of the dock wall.

35. (Cancelled)

Page 8 of 17

Customer No. 30734

36. (Original) A dock seal according to claim 35, further comprising a first corner panel

adapted to overlap said top portion panel assembly and said first expandable panel assembly

when mounted, and a second corner seal adapted to overlap said top portion panel assembly and

said second expandable panel assembly when mounted.

37. (Previously Presented) A method of providing shelter about the end of a vehicle body

parked at a dock opening and an inside face facing into the opening, with the front face and the

inside face meeting at a corner, comprising:

installing a first panel assembly to a first vertical side of the dock opening, the first panel

assembly comprising:

a first front panel and a first rear panel, wherein said first front panel is adapted

for essentially pivotal movement relative to said first rear panel about a first axis;

wherein installing the first panel assembly comprises flexibly mounting the first

rear panel to the dock wall; and,

installing a second panel assembly to a second vertical side of the dock opening, the

second panel assembly comprising:

a second front panel and a second rear panel, wherein said second front panel is

adapted for essentially pivotal movement relative to said second rear panel about a second axis;

wherein installing the second panel assembly comprises flexibly mounting the

second rear panel to the front face of the dock wall, so that the first panel is mountable to the

front face of the dock wall so that the second axis is adjacent the front face and spaced laterally

outside of the corner.

Serial No.: 10/615,296 Customer No. 30734

38. (Original) A method according to claim 37, wherein the first panel assembly is indirectly

mounted to the dock wall.

39. (Original) A method according to claim 37, wherein the first axis of rotation and the

second axis of rotation are substantially perpendicular to the dock floor and substantially parallel

to one another.

40. (Original) A method according to claim 37, further comprising installing a top portion

assembly along a top horizontal side of the dock wall opening.

41. (Original) A method according to claim 40, wherein the top portion assembly comprises a

top front panel and a top rear panel, wherein said top front panel is adapted for essentially pivotal

movement relative to said top rear panel about a first axis.

42. (Original) A panel assembly according to claim 16, wherein said seal member comprises

as serrated portion.

43. (Previously Presented) The panel assembly according to claim 1, wherein the first panel

is flexibly mounted directly to the dock wall.

44. (Previously Presented) A panel assembly according to claim 41, wherein the first panel is

flexibly mounted to the dock wall using an L-shaped spring.

45. (Cancelled)

46. (Cancelled)

47. (Previously Presented) The panel assembly according to claim 45, wherein the L-shaped

spring is a mounting angle thermo formed into the first panel.

48. (Cancelled)

Serial No.: 10/615,296 Customer No. 30734

49. (Previously Presented) A panel assembly according to claim 45, wherein the L-shaped

spring mounts the first panel directly to the dock wall.

50. (Currently Amended) A panel assembly mountable along an opening in a dock wall for

providing a dock shelter or seal, comprising:

a first panel and a second panel, wherein said second panel is adapted for

essentially pivotable movement relative to said first panel about a first access, and said first panel

is adapted for essentially pivotable movement relative to a front face of the dock wall about a

second axis, and wherein the first panel and the second panel are hingeably joined by a hinge

comprising a backing member.

51. (Previously Presented) The panel assembly according to claim 50, wherein the backing

member seals the panel assembly at the hinge region.

52. (Previously Presented) The panel assembly according to claim 50, wherein the backing

member spends substantially all of the height of the panel assembly at the hinge region.

53. (Cancelled)
